

Metadata Checksum

Metadata Checksum

If requested, the SHA1 checksum of the metadata file MUST be provided to the Federation Operator. This is to verify that the metadata is not corrupt, and also that it is authentic before it is published.

Generate Checksum

Windows

Launch a command-line and then use the following command.
`CertUtil -hashfile <metadata file> SHA1`

Mac

Launch a terminal and then use the following command.
`shasum -a 1 <metadata file>`

Linux

Launch a terminal and then use the following command.
`sha1sum <metadata file>`
