

Fedvis

The Fedvis federation facilitates secure communication within the Swedish healthcare system. Managed by the Swedish regions, it connects healthcare clients with the Nationella läkemedelslistan system, owned by the Swedish E-health Agency, ensuring efficient and trusted data exchange.

Fedvis Components, Standards, and Relationships

Fedvis' SAML 2.0 federation comprises a central metadata repository that contains the SAML Identity Provider and Service Provider metadata of all members. The technical requirements imposed on members' SAML implementations, as well as the metadata, are defined in the Fedvis SAML Technical Profile. The Attribute Profile outlines rules and requirements for the attributes to be used in the federation, specifying which attributes are included in the SAML Assertion.
