Service Status and Maintenance Information

Current Operational Status

⚠ **Sambi: Rapid Growth Notice**

Sambi is currently expanding quickly. If you experience issues handling the increased metadata size, more information is available here.

Regular Maintenance Window

Regular maintenance windows are scheduled every Wednesday from 18:00 and 02:00.

Scheduled Maintenance Windows

A maintenance window normally does not affect system availability; however, in some cases brief interruptions may occur. Brief interruptions are defined as lasting less than ten minutes and are usually significantly shorter than that.*

All maintenance windows are scheduled between 18:00 and 02:00.

*Services that are not designed to have a high availability dependency (for example, metadata registries) may, in exceptional cases, be unavailable for the entire maintenance window without prior notification.
